Abstract

Researchers have dealt with statistic-stylistic research largely so that it may be used to recognize different styles and distinguish it from others in any text. In this study, samples of the theses *Attawabe’a wa Azzawabe’a* by Ebne Shoheid and the *Alghofraan* by Maa’rrei have been examined according to the Busemann Equation. The stylistics based on this equation is quantitative. The analysis of the two theses, based on the principles of this equation, revealed the presence of a literary style. In addition, the literary superiority of Ebn Shoheid’s work versus the other was also present. The factors in Busemann Equation which have led to the rise of the proportion of verb to
