Abstract

This study was an attempt to explore how patterns of lexicogrammar are used to signal the importance of content in Persian academic lectures. These expressions are referred to as importance markers here. Sixty (60) authentic academic lectures compiled in the Persian corpus of SOKHAN were explored with a mixed-methods (exploratory) approach and a corpus-driven method. The results mirrored the findings of Deroey and Taverniers (2012). The results showed that importance marking of portions of discourse can be done by making use of evaluative adjectives and metalinguistic nouns, relating the discourse to assessment, and involving the participants in the discourse. Additionally, importance marking was found to be done with one of the five structures of nominal, verbal, adjectival, adverbial, and exam-related. Among these, verbal
